

Reflector Parking Curbs

Made from 100% Recycled Tires

Better than concrete

At a fraction of the weight of concrete parking curbs, one person can move or install these curbs without the cost of heavy equipment.

The great thing about our parking curbs is that they are flexible rubber, unlike concrete that cracks and corrodes with moisture expansion during the winter and salt from the road.

Rubber parking curbs often cost less than concrete, but when you factor in the cost of maintenance or replacement, rubber is far more economical.

Installation & Maintenance

- place parking curb in desired location
- drill holes in marked spots on parking curb
- drill pilot hole into surface
- install lag bolt (hammer drill) into the pre-drilled hole

Features & Advantages

- high visibility reflective tape
- absorbs impact and won't damage your undercarriage of your car
- economical and long lasting
- less expensive than concrete to install as no heavy equipment is needed
- easily installed by 1 person
- flexibility allows curb to contour to uneven surfaces

Item Name	Dimensions	Weight	Stock #	UPC Code	Qty/Skid
